

Own a ticket. Watch the bots work. Collect your share.

Member experience

The screen that turns sceptics into ticket holders — daily PnL, your seat count, your earnings, your payouts. Real product. Real results.

Most groups still pitch “AI trading” on a PowerPoint. Botso.ai is the opposite: a live platform, a measured book, and a member experience your audience can log into today.

MEASURED RESULTS — PRODUCTION LAYER 3 BOOK · EUR @ \$1 = €0.87

JUNE 2026

€+12,963

\$+14,900 USD

Nearly thirteen thousand euros in thirty days — before you scale ticket size.

€+432/day · \$+497/day · 56.6% win rate · 1,939 trades · 14 winning days

JULY 2026

€+18,536

\$+21,306 USD

July beat June. Momentum on the book — not a one-month fluke.

€+598/day · \$+687/day · 58.5% win rate · 2,365 trades · 22 winning days

61 DAYS · LAYER 3 BOOK

€+31,499

\$+36,205 USD

Over thirty-one thousand euros in two months — at conservative ~€87 unit size.

€+515/day average · \$+592/day · 57.6% across 4,304 fills · 36 green days out of 61 · Same bots. Same rules. Ready to scale.

This is the proof point. Not a backtest screenshot — the same Path A book partners review in our valuation memos. Euros primary · USD at dashboard FX.

Imagine launching this inside your organisation tomorrow. A trial pool lets everyone see the same June and July results you are about to — then tickets fund the next chapter. You are not buying a promise. You are buying a system that already produced €+31,499 (\$+36,205) across 61 days on the production Layer 3 ledger, with room to scale unit size as trust grows.

Critical context: these headlines were built at ~€87 (~\$100) unit size — deliberately conservative to prove the edge before size-up. Figures use the same \$1 = €0.87 rate as dashboard.botso.ai. The infrastructure, API, and console in this deck are built for the multiplier that comes next.

Botso.ai is ticket-based pool funding + autonomous trading + transparent profit share — one platform, one API, one story your group can sell tomorrow.

YOUR PATH TO SIMILAR RESULTS

1 Try it free — zero capital at risk

Your people join a trial pool on real historic bot performance. They see the dashboard, the earnings logic, and the ticket model before anyone writes a cheque.

2 Sell tickets — fund the pool

Each ticket is an equal share of upside. Your group sets the cap, sells the seats, and fills the pool through a production-grade ticketing flow members already understand.

3 Bots go live — 24/7

When the pool is funded, autonomous strategies trade around the clock. Every session feeds the ledger your members see on [dashboard.botso.ai](#).

4 Profits split — transparently

Gains allocate per ticket. Members watch daily PnL, monthly totals, and their personal share. You keep commission. They keep trust.

THE PLATFORM — LIVE TODAY

Six systems. One product. Ready for your group to run.

Autonomous trading engine

Layer 3 bots with Path A discipline — selective entries, profit-take / stop rules, sit-out when unlocked. Results you can show, not slides you have to explain away.

Client console

[dashboard.botso.ai](#) — live PnL, ticket fill, earnings, payments. Dark and light themes. Built for members and operators, not spreadsheets.

Ticketing & pool funding

Caps, assignments, payments, and fill status. The commercial layer that turns a trading edge into a syndicate your group can actually run.

Allocations & payouts

Automatic profit share by ticket. Month filters, owed vs paid, audit trail — the numbers members ask for on the first call.

REST API

Pools, members, tickets, payments, transparency — wired for your apps, partner integrations, and white-label front ends.

Multi-tenant org model

Secure auth, roles, activity log, GDPR-aware architecture. One platform, many clubs, many desks — each with its own pool and ledger.

Turn the page: every screen shows dark and light side by side — what your members see. Performance, tickets, earnings, payouts. This is what closes the room.

Overview

The money slide for members: daily and monthly pool PnL, ticket fill, win rate, and personal earnings in one view. This is how you prove the bots are working while the deal is still on the table.

DARK THEME

LIGHT THEME

Pools

Which syndicate am I in? How full is it? What is live? Members never guess — they see the pool they bought into and the status that justifies the next ticket sale.

Tickets

Your seat in the pool. One ticket, one equal share of upside. This screen is the contract made visible — the link between buy-in and the results on Overview and Earnings.

DARK THEME

LIGHT THEME

Orders

Proof of purchase. Every ticket order tracked so members trust that what they paid for is what appears in their account — no “we’ll sort it offline” conversations.

DARK THEME

LIGHT THEME

Members

Social proof inside the pool: who else is in, how many tickets they hold. Transparency sells the next seat — without exposing private payout details.

DARK THEME

LIGHT THEME

My earnings

The question every member asks out loud: “What did I make?” Allocations by month, performance stats, owed vs paid — answered in one place, tied to the same ledger as the trading results.
