

Run the house. Show the ledger. Scale the pool.

Operator & admin experience

The control plane behind the syndicate — launch pools, assign tickets, run allocations, reconcile payments, audit every action.

Most groups still pitch “AI trading” on a PowerPoint. Botso.ai is the opposite: a live platform, a measured book, and a member experience your audience can log into today.

MEASURED RESULTS — PRODUCTION LAYER 3 BOOK · EUR @ \$1 = €0.87

JUNE 2026

€+12,963

\$+14,900 USD

Nearly thirteen thousand euros in thirty days — before you scale ticket size.

€+432/day · \$+497/day · 56.6% win rate · 1,939 trades · 14 winning days

JULY 2026

€+18,536

\$+21,306 USD

July beat June. Momentum on the book — not a one-month fluke.

€+598/day · \$+687/day · 58.5% win rate · 2,365 trades · 22 winning days

61 DAYS · LAYER 3 BOOK

€+31,499

\$+36,205 USD

Over thirty-one thousand euros in two months — at conservative ~€87 unit size.

€+515/day average · \$+592/day · 57.6% across 4,304 fills · 36 green days out of 61 · Same bots. Same rules. Ready to scale.

This is the proof point. Not a backtest screenshot — the same Path A book partners review in our valuation memos. Euros primary · USD at dashboard FX.

Imagine launching this inside your organisation tomorrow. A trial pool lets everyone see the same June and July results you are about to — then tickets fund the next chapter. You are not buying a promise. You are buying a system that already produced €+31,499 (\$+36,205) across 61 days on the production Layer 3 ledger, with room to scale unit size as trust grows.

Critical context: these headlines were built at ~€87 (~\$100) unit size — deliberately conservative to prove the edge before size-up. Figures use the same \$1 = €0.87 rate as dashboard.botso.ai. The infrastructure, API, and console in this deck are built for the multiplier that comes next.

Botso.ai is ticket-based pool funding + autonomous trading + transparent profit share — one platform, one API, one story your group can sell tomorrow.

YOUR PATH TO SIMILAR RESULTS

1 Try it free — zero capital at risk

Your people join a trial pool on real historic bot performance. They see the dashboard, the earnings logic, and the ticket model before anyone writes a cheque.

2 Sell tickets — fund the pool

Each ticket is an equal share of upside. Your group sets the cap, sells the seats, and fills the pool through a production-grade ticketing flow members already understand.

3 Bots go live — 24/7

When the pool is funded, autonomous strategies trade around the clock. Every session feeds the ledger your members see on [dashboard.botso.ai](#).

4 Profits split — transparently

Gains allocate per ticket. Members watch daily PnL, monthly totals, and their personal share. You keep commission. They keep trust.

THE PLATFORM — LIVE TODAY

Six systems. One product. Ready for your group to run.

Autonomous trading engine

Layer 3 bots with Path A discipline — selective entries, profit-take / stop rules, sit-out when unlocked. Results you can show, not slides you have to explain away.

Client console

[dashboard.botso.ai](#) — live PnL, ticket fill, earnings, payments. Dark and light themes. Built for members and operators, not spreadsheets.

Ticketing & pool funding

Caps, assignments, payments, and fill status. The commercial layer that turns a trading edge into a syndicate your group can actually run.

Allocations & payouts

Automatic profit share by ticket. Month filters, owed vs paid, audit trail — the numbers members ask for on the first call.

REST API

Pools, members, tickets, payments, transparency — wired for your apps, partner integrations, and white-label front ends.

Multi-tenant org model

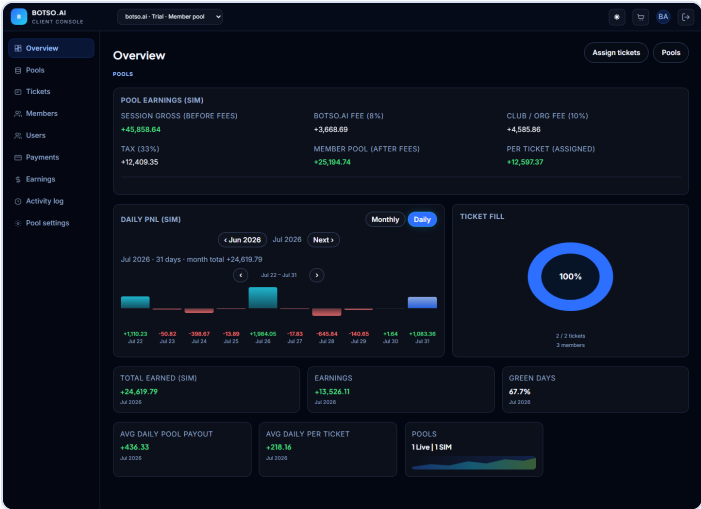

Secure auth, roles, activity log, GDPR-aware architecture. One platform, many clubs, many desks — each with its own pool and ledger.

Turn the page: every screen shows dark and light side by side — the real operator console. Pools, tickets, users, allocations, payments, settings. This is what you run.

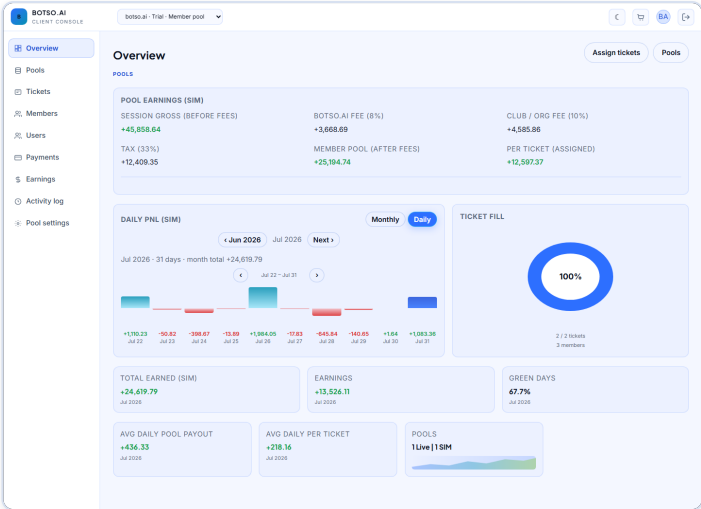

Overview

Your at-a-glance proof for partners and investors: pool PnL, fill rate, club stats, and the same narrative members see — so operators and members never tell different stories.
